

## Steriflow Pump 30/50/150 ml

**The 30 ml pump** housing is available in an autoclavable and a non-autoclavable version.

The pump has a capacity of up to 30 ml/min. This is perfectly adequate for most operations. The water volume is controlled by an easy-turn knob on the pump housing.

The pump includes a piece of autoclavable rubber tubing (1.20 m) with a non-rust tube attachment at the end. A small silicone tube, which fits onto the handpiece, is connected to this attachment and there is a needle at the other end for attachment to the sterile bag.

**The SR10/50/150** has a capacity of 40 - 150 ml/min. The water volume is controlled by an easy-turn knob on the pump housing.

The pump is supplied with a short piece of pump tubing. An extension of this tubing is not currently available from Lysta. This pump housing is not autoclavable.

Please see the price list for further information.

Nipple set for Steriflow (see price list).
